

Equine Cremulator

Advanced remains processor and extraction system for professional post cremation results.

Equine Cremulator

The updated Addfield Equine cremulator is the ideal accessory to accompany any horse cremation business. Constructed from hard wearing, rugged mild steel. Benefiting from a new pulverising chain system, the cremulator rapidly reduces all bone fragments remaining after the cremation process. Processing them down into a fine, presentable ash in minutes.

From the dust tight seal on the main drum through to a screw fitted funnel lid ash leakage is prevented. Benefitting from an inclusive cyclone extraction system to provide a clean and dust free operation. The loading chamber is large enough to handle the majority of horses in a single process.

Streamlined Operation

Designed for ease of use, simply load remains into reduction chamber, set the timer and the cremulation will begin, breaking the bones down into a fine presentable ash.

Ash extraction is automatic through the cyclone system which pulls the ash through once it is at the optimal size for easy decanting into any presentation urn ready to return to your customer.

Cremulator Specification	
External Length (mm)	781
External Width (mm)	667
External Height (mm)	1362
Chamber Volume (meters ³)	0.02
Weight (Approx. kg)	120

*We reserve the right to change the specification, dimensions and quality of materials from time to time, so long as the alteration is minor or an improvement to the said product.
